

D7 Inflation/ Deflation Valve

Registered Design

The D7 valve is designed for use in demanding applications where a compact design is required; such as Military and Commercial RIBs, River Rafts and Inflatable Boats.

It has a shorter, smoother internal profile, making it ideal for smaller diameter tubes, for example inflatable kayak floors.

D7 Key attributes and benefits:

- High flow for size.
 - Rugged and reliable.
 - Low profile at 50mm overall height.
 - Smooth, snag free cap.
 - 'O' ring seal on the valve core to reduce the risk of lateral leaks in the fabric.
- 100% tested during production.
 - ACETAL (POM) plastic parts give high strength, chemical, ozone and shock resistance.
 - Cap works as a second seal
 - Internal cap strap.
 - Core available in grey or black. Caps available in grey, black, white or yellow.
 - Company brand can be added to the cap, subject to a minimum quantity and tooling charge.
